

In-Vehicle Monitoring Solution (IVMS)

Wirelessly manage, track and monitor your fleet

Ooredoo's IVMS Solution gives your business a way to improve your fleet management procedures; whether you operate on a small scale, a large commercial organisation, or a government entity. Using our wireless coverage and GPS fleet tracking, you can optimise and manage fuel and labour costs, gain real-time vehicle mapping and customise reporting to get just the data you need.

Service description

IVMS

- **A complete solution** – A telematics box, complete with a SIM card that can be fitted to a wide variety of vehicle types. The on-board data system transmits information via GPRS, SMS and satellite in real time to the server
- **Web portal** – A secure website with a dashboard to provide reporting analysis and optimisation of fleet vehicle management
- **Decision-making tool** – Customised reports generated based on the data transferred to your server

Remote Asset Monitoring

Wirelessly track not only your moving vehicles but also your static assets, such as power generators and access controls, i.e., e-gates, containers temperatures, etc.

Product details

- **Vehicle tracking** – Locate your mobile assets, status information and routes
- **Rules and alerts** – Driver behaviour management in terms of geo-fencing, harsh breaking, idle time and maintenance alert notifications
- **Reports and diagnostics** – Operating costs and fuel consumption
- **Dispatch and order management** – Asset movement, job status, task completion and route optimisation

Customer benefits

- Reduce fuel and labour costs
- Enhance planning and routing
- Optimise labour and vehicle utilisation efficiency
- Abiding by legal regulations
- Asset and equipment security
- Better worker safety
- Improved customer service
