

# DDoS Secure Internet Service

## Guard your Business against threats with DDoS Secure Internet

In today's online business environment, malicious online attacks against customer networks are an increasing concern. Not only can they cause a breach of potentially sensitive or confidential information, they can freeze your business processes. Websites, applications and network infrastructures are targeted by Distributed Denial of Services (DDoS) attacks consequently, disrupting daily business activities.

Ooredoo's DDoS Secure Internet Service prevents hacker attempts to penetrate your computers or websites and even use them as hosts to target various online systems. Failure to detect irregularities and attacks can cause a shutdown to any system from public entities such as government portals to your very own private network resulting in significant system damages and cost. DDoS Secure Internet Service is your system guard to detect and eliminate potential attacks and allow strictly 'clean' traffic to pass through your network.

### Service Features

- A complete security service portfolio
- Legitimate traffic flow through your network
- Proactive monitoring web traffic and observing unusual patterns in real-time to detect and mitigate any irregularities
- Flexibility for on demand mitigation services when attacks occurs
- Protection from different types of security threats
- Statistical analysis report when identifying attack
- Traffic report summary provided to customer if attempted hack occurs
- 24/7 proactive monitoring and mitigation
- This service is offered to our Ooredoo Internet Professional (OIP) and Ooredoo Internet Enterprise (OIE) customers.

### Customer Benefits

- Early detection and alerts of unusual traffic activity
- Suitable for all business/government entity sizes
- Peace of mind to focus on daily business activities instead of systems security issues
- Enhanced productivity with reduced external threats
- Secure business credibility
- Avoid loss of revenue due to systems downtime
- Regular access to detailed information on detected attacks
- Experienced security engineers to monitor your systems
